Self Collection Instructions for COVID-19 Testing

1. Scan this QR code to begin registration

Scan the above QR code using the camera on your smartphone. Follow the prompts on the SummerBio lab portal to register. This will allow the lab to connect your unique test kit to your personal information.

NOTE: Please verify your date of birth is entered correctly to avoid login issues in the future.

2. Select the icon to begin.

Using the camera on your phone, scan the unique barcode on your test tube.

You can also type the 9-digit numeric code (no dashes or spaces) in the “Scan Barcode” field.

3. Open the nasal swab packaging and remove the nasal swab, taking care not to touch the tip to any surface or lay it down.

Hold the swab with fingers placed about 1½ inches from the tip.

4. Gently insert the swab 1½ inches into each nostril and rotate the swab for 15 seconds per nostril.

If the swab has visible mucus, discard the swab and obtain a new one from the COVID testing bus.

5. Insert the swab into the collection tube. Mix the swab thoroughly in the solution for 30 seconds.

IMPORTANT: Do not break the nasal swab off into the test tube.

6. Discard the used nasal swab and white cap.

Re-cap the test tube with the yellow cap. Ensure the cap is tight on your test tube and return it to the COVID testing bus.
